1 Things Left To Do

TODOs can be inline, off to the side or an item in a list.

!TODO: *In the margin*

TODOs are normally placed in the margin. This makes it easy to spot them as you scan through the paper. Because there is not much space in the margin, the text should be short, such as “flesh out” or “make clearer”. The command for this is `\TODO{margin text}`.

!TODO: An inline TODO is coloured blue . Inline TODOs, created with `\TODOinline{text}`, allow for a much larger block of text to be entered. They are often used for longer comments, particularly for co-authors to read.

- When in a list environment, you may have an incomplete list
- Inserting a `\TODOitem` as the last `\item` allows you to indicate that more items should be added, like so:
- [Insert more items](#)

2 Bad references

This is a valid reference: 1. This is invalid: ?? . The build script will rebuild the required number of times to make the valid reference work, but will warn about the invalid one.

We can also insert citations, both proper ones ([1]) and improper ones ([?]). The former will be found correctly, the latter will be warned about.

References

[1] This is a valid citation. <http://example.com>.
